**Lyon L-68.0287**, Thailand: introduced 1964; from H. Kamemoto. Planted **ULMakai, Verschaffeltia Isl.** Voucher: KMN 577 -HLA, UH. Starts vegetative growth in late Spring and begins to flower in June, until about early fall when it begins to yellow and goes dormant. Grows to c.18" tall (KMN 577 says 30" ht.); yellow flowers are borne in terminal pendant panicles. At the axils of the green basal bracts of the panicle are produced bulbils which can be harvested in fall and germinated in spring. Rhizomes remain dormant during the winter, and can be divided and planted in spring.
